

Porcelain veneers are the Lexus of cosmetic dentistry. With porcelain veneers, teeth that are discolored, crowded, spaced, misshapen or broken can be made brilliantly beautiful and lifelike. With only two treatment visits, many patients can have the beautiful smile they have always wanted. After ensuring that the teeth and gums are healthy, the dentist will remove a thin layer (about 1.5 mm) from the front and sides of the teeth to be veneered. Impressions are taken for the porcelain artist to use in fabricating the thin porcelain veneers. Temporary acrylic veneers are then made and cemented to the teeth for the 2 to 3 weeks it takes to have the veneers made. At Dental Visions, we use the DaVinci dental laboratory in California to fabricate our veneers. This is the same lab used by the dentists on the TV show "Extreme Makeovers."

On the second visit, the temporary veneers are removed and the porcelain veneers are fitted and bonded to the teeth. The patient leaves the office with a beautiful, dazzling smile! Call us for a consultation appointment to see if you are a candidate for porcelain veneers.
